(a)
Correlation $C(r)$
Distance r (units of r_0)
starling-like ($\Omega \approx 0.97$)
critical mixture
N = 500
N = 1,000
N = 2,000
N = 4,000
(b)
Correlation $C(r)$
Rescaled distance r/L
(c)
Correlation length ξ
System size $L = \sqrt{N/\rho}$
starling-like: $\xi \approx 0.33\,L - 1.0$
critical mixture: $\xi \approx 0.28\,L + 0.0$
